Dev/Owner Wallet	pag. 7
How do the Contract Works?	pag. 7
Closing Notes	pag. 8

## PROJECT DESCRIPTION

Iron Dogecoin is a new meme-token fan-based on the figure of IRON MAN in a doge version.

With respect to other project this one is based on a marketing fee that the owner claims to be used to increase the holders to 100,000. Another part of the bnb trading fee will be stored in a Vault that will be used to buyback and BURN Irod Dogecoin to restabilize the price chart during heavy dumps to protect the investors and let the journey go on!

The contract is secured and trading cannot be stopped.

The Audit is **passed** with no red flags!

## PROJECT INFORMATION

Name	Iron Dogecoin	Max Transaction	20,000,000 \$IRONDOGE
Launch Type & Date	Presale on Pinksale	Max Wallet	20,000,000 \$IRONDOGE
	To be announced	Token Distribution	45% Presale 12% Private sale & partnership 40% Pcs Liquidity 3% Exchange Listing
Total Supply	1,000,000,000 \$IRONDOGE		
Taxes	5% Marketing 5% Buyback and burn Fee		

## DEVELOPER'S SUBMITTED DESCRIPTION

Iron Dogecoin is the heroic version of Dogecoin. It has arrived on Binance's Smart Chain to multiply your BNBs.

Two simple features, burning and marketing to give you the best chance of moon. No rewards, no ponzi or other forms of deception: you moon if you buy and hold, simple as that! Iron Doge will do the rest for you.

The next Doge and Shiba has arrived! he will kill the zeros with his superpower! WOOF!

IronDoge will use part of the fees collected to do strategic buybacks of \$IRONDOGE, all tokens acquired will be burned making it a deflationary token.

It will combine this with a strong utility including staking (initially of IronDoge's native token, \$IRONDOGE, but there are future plans to provide staking pools of various BSC & ETH Tokens) and a Dashboard, which shows the values of the user's funds in USD and \$IRONDOGE.

Iron Dogecoin is a community driven token / platform. Iron Dogecoin will be heard everywhere among the crypto telegram community thanks to influencers and crypto gurus.

Further plans to launch a marketing campaign on TikTok and Twitter to raise awareness and reach 100,000 holders. This will likely go hand in hand with the launch of parts of its ecosystem.

In its final stage of development Iron Dogecoin is aiming for a bridge between Bsc and Ethereum, when Ethereum finally becomes 2.0 and fees are lower so that it will be purely decentralized.

Buy Iron Dogecoin and your value will go up, you have to hold it for a long time otherwise this will not be possible. You can day trade or gamble if you want but Iron Dogecoin will not be responsible if you miss the moonshot.

When it is ready to fly and control its superpower it will explode and you will be left behind. Don't miss!

# SECURITY QUICK REPORT

## Contract Analyzed [Solidity v. 0.8.3]

<https://bscscan.com/address/0x0db6ba8795020a110533da8f62d9ea8766b92922#code>

**HIGH – 0 Risk**

**Medium – 1 Risks**

**Low – 2 Risks**

**Minimal – 0 Risk**

Risk assessment is color-coded for convenience.  
The risks are as follows, and their respective colors:

**High** - Could either honeypot, rug, somehow scam the user, or prevent the contract from functioning as intended.

**Medium** – This could allow the owner to stop trading while being able to trade himself, make the user lose money, or something similar.

**Low** – Risks that could allow the owner to somehow have an edge, allow users he chooses to have an edge, or the ability to manipulate the contract, prices, or something similar.

**Minimal** - Risks that are not potentially investment-threatening, but need to be mentioned anyway.

## SECURITY & CODE

### Owner Receives Auto-Liquidity [**Medium Risk**]

The owner receives all-new liquidity from the auto-liquidity tax. He can then do anything with this liquidity, including unpairing it.

### Limitless Exclusions [**Low Risk**]

The owner can set any address to be excluded from fees or rewards at any time.

### Manual buyBack [**Low Risk**]

The buyback is triggered manually by an external wallet, that receive the funds.

## IRON DOGE LP HOLDERS

This token is not launched yet so no liquidity exist. Since this token will be sold in a pre-sale the liquidity will be locked directly by the launchpad.

Pay attention for how long it will be locked!

LP Address:

<https://bscscan.com/address/0x6316b0d28ba7eeb7a398c803a4e5d0f7183a5391>

## DEV/OWNER WALLET

Deployer/Owner wallet: 0xEBCDe14E927015d398D0a9D0cD1912a4E7860ff0

This wallet has particular privileges and is the only one able to execute a particular class of functions that are onlyowner.

The contract is not renounced, however **this contract doesn't let the Dev take control of trading.**

## HOW DO THE CONTRACT WORKS?

10% tax is deducted from transfers and stored in the contract.  
**Those tokens are NOT withdrawable by the team or owner.**

5. _totalFee
10 <i>uint256</i>

If swapEnabled is set to true, new liquidity will be generated by the contract and BNB will be sent to particular wallets. The contract sell tokens when swap enabled is true and when the contract token balance overcame a threshold. Tokens will be sold in little batches without affecting heavily the price.

22. swapEnabled
True <i>bool</i>

The team can turn OFF the swapEnabled function when needed, check <https://t.me/IronDogecoin> to know more.

The 5% BNB tax will be collected in this wallet that the team has publicly declared: 0xD59dD66846A556c5E94A058c5F119C800D43c5ed.

Lorem ipsum

## CLOSING NOTES

Nothing in this contract is overtly malicious or purposely coded to put users at risk. The contract is **SAFE**. Trading is still risky, high price fluctuations can occur.

Minor risks are present and are average ones that can be found in most contracts.

The decentralization of this contract is high, and all the safety measures have been taken by the team.

It is worth mentioning that the owner cannot set the fees higher than the default ones, **fees can only be lowered**. As well as for the Max Transaction and MaxWallet the **owner cannot stop trading by abusing of these functions**.

The ownership is not renounced thus giving a centralization factor, however the contract is reliable and any issue can be widely corrected and solved promptly by the dev team.

Future listings in centralized exchange can be overtaken without issues since the owner can update the whitelisted addresses list thus including the new exchange wallet.

The transparency of the contract is high, all major variables are present and several public functions can be called by the investors to check the numbers, the team wallets unlock time and several other indicators for the sake of transparency.

A Professional ANTISNIPE is in place. For the first 3 blocks after launch all executed transactions will be reverted, thus blocking all snipers that are triggered as soon as liquidity is added. Plus all transactions triggered by the same wallet during the same block will be reverted. A gas limit function is present to avoid using excessive gas.

### **Please Do Your Own Research.**

Investing in crypto assets is always risky. Not investment advice. We evaluate the safety of the code, the tokenomics, the wallet distribution.
